Bearing Grease, is it ok to mix disimilar greases??? - The Hull Jun 25, 2002 — These two additives are not compatible, so don't mix them. If you are just adding a shot of grease to your bearings, and don't know what type is in them, you can get by using a clear (amber) unfortified grease. At least that way you are not attacking the additives in the grease that's already there

Maintenance Tip: Never Mix Greases | NASH - Gardner Denver
 When two incompatible greases are mixed, one of two things generally happens: the mixture hardens and will not release any of the oil or the mixture softens and releases all of the oil. In either case, the end result is basically the same; there is effectively no lubrication
